Set: Friday 21st September 2018

Complete By: Wednesday 26th September 2018

Can you add on 10 to these numbers? You can use the 100 square if you need to. Remember that when you add a full group of ten on the hundred square you jump underneath. The rule is that the tens get one bigger but the units stay the same.

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

$$36 + 10 =$$

$$42 + 10 =$$

$$27 + 10 =$$

$$51 + 10 =$$

$$79 + 10 =$$

$$66 + 10 =$$

$$18 + 10 =$$

$$82 + 10 =$$

Now try these that are adding on more groups of tens. This time you need to jump down 2 or 3 jumps on the 100 square. The rule will be the tens get 2 or 3 bigger but the units will still stay the same as we are adding full groups of ten.

$$24 + 20 =$$

$$38 + 20 =$$

$$35 + 30 =$$

$$68 + 30 =$$
